NATURAL IMMUNITY

Why You Should NOT Vaccinate!

An Introduction by Pat McKay

If after knowing that some of the health hazards from vaccinations include AIDS, allergies, arthritis, asthma, autism, blindness, cancer, cataracts, cerebral palsy, chronic ear infections, conception rate lowered, encephalitis, epilepsy, fibrosarcoma at the vaccination site, hyperactivity, hyperthyroidism, hypothyroidism, interdigital pyoderma, juvenile type diabetes, learning disabilities, leukemia, lupus, meningitis, mental retardation, multiple sclerosis, paralysis, short lifespan, sudden infant death syndrome (SIDS), tuberculosis, damage to and/or failure of heart, kidneys, liver, pancreas and other organs of the body, and ALL of the diseases for which your animal or child were vaccinated, are you still willing to take that risk of vaccinating? If so, WHY? There is no proof that vaccinations work at all.

The general public has been sucked in to believing that mercury derivatives, decayed animals, diseased blood, sera, bacteria, viruses, fungi, mucous, pus, urine, feces, antibiotics, formaldehyde, acetone, aluminum and carbolic acid put into a mixture; shot through our greatest protector, our skin; directly into our blood system is the answer to keeping us free of disease. How barbaric!

Yet, the majority of people really do believe this works. There is no proof, but if you hear something often enough, it becomes "true" whether it is or not. This is what has happened with vaccinations.

Have you ever asked your veterinarian or your pediatrician before they vaccinated your animal or your child for written medical proof the vaccines work?

The information in my book for most people will come as a complete shock. When the realization hits, please don't blame yourself or feel guilty. You counted on your doctor to tell you the truth. And in defense of these medical professionals, I will say most of them don't know the truth either, as you will hear from veterinarians themselves in my book.

The medical community has been brainwashed as well. They are told in medical school that vaccines work, and they take it on faith. Most veterinarians are sincerely interested in the best care for their patients; however, because new concepts of vaccination are currently being taught in veterinary schools that just continues to perpetuate the veterinarian's belief in them.

Western or allopathic medicine is always saying they have to have proof, double-blind studies, and yet, has your veterinarian ever shown you proof that vaccinations work?

In my book, you will read many quotes similar to the following: Viera Scheibner, PhD, states, "I did not find it difficult to conclude that there is no evidence whatsoever that vaccines of any kind are effective in preventing the infectious diseases they are supposed to prevent. Further, adverse effects are amply documented and are far more significant to public health than any adverse effects of infectious diseases.

"Immunizations not only did not prevent any infectious diseases, they caused more suffering and more deaths than has any other human activity in the entire history of medical intervention. It will be decades before the mopping-up after the disasters caused by childhood vaccination will be completed. All vaccination should cease forthwith and all victims of their side-effects should be appropriately compensated."

Has Your Veterinarian Informed You That...

Vaccines are immune system destroyers

My Pet...*Naturally*

Vaccines are composed of bacteria, fungi and viruses capable of genetic mutation inside your animal's body

Vaccinations can result in major brain damage

Vaccines are not responsible for the decline in diseases Many veterinarians do not vaccinate their own animals

Often one-third to one-half of a veterinarian's income comes from vaccinations
